Printed in Great Britain by Adlard and Son, Ltd, Dorking. Set in 10/12 pt Times.

Journal of Physics D: Applied Physics

Honorary Editor

Professor A J Forty PhD DSc

Editorial Board

Professor G Carter PhD FInstP
D J Craik PhD
V S Crocker PhD
H G Jerrard PhD FInstP
Professor D H Parkinson DPhil FInstP
J Philibert (*France*)
Professor S A Ramsden DPhil
D R Sweetman PhD

Managing Editor

D G Fisher PhD FInstP

Assistant Editor

Mr D F Manley BSc

Contents

NO 1 JANUARY 1972

LETTERS TO THE EDITOR

L1 *A R Jones* · Scattering and emission of radiation by clouds of elongated particles

L4 *M A Nettleton* · Thermal ionization of soot particles in gases heated by reflected shocks to 2500 to 4000 K

L6 *S Rajapandyan and G R Govinda Raju* · Ionization current multiplication in a non-uniform electric field in dry air

PAPERS AND RESEARCH NOTES

Mathematical Physics

1 *A B Birtles* · Closed-form expressions for the magnetic field due to a single-layer cylindrical coil

6 *S Morsy and M M R Williams* · Neutron flux perturbations due to absorbing foils

Mechanics, Elasticity, Vibration, Acoustics

12 *J D Kester and G F Pickett* · Application of theoretical acoustics to the reduction of jet engine noise

Heat, Thermodynamics

28 *J H Neilson and R A Crawford* · Efficiencies of thermodynamic processes

Electrodynamics and Particle Optics

43 *K Kanaya and S Okayama* · Penetration and energy-loss theory of electrons in solid targets

Quantum Electronics, Quantum Optics

59 *D Andreou, V I Little, A C Selden and J Katzenstein* · The output characteristics of a *Q*-switched liquid laser system Nd^{3+} : $POCL_3$: $ZrCl_4$

Optics

64 *V P Nayyar, B L Mehta and M C Dubey* · Resolution of a centrally obstructed circular aperture in partially coherent light (R)

Atomic and Molecular Physics

69 *M F Payne and A C Riviere* · Angular spread of hydrogen atoms formed by electron capture and dissociation of H^+, H_2^+ and H_3^+ in H_2, H_2O and C_8F_{16} at energies of 2·5 to 15 keV

Fluids, Plasmas and Gas Discharges

79 *J Lawton and P J Mayo* · The effect of secondary gas flow on the distribution of energy transfer from plasma torches

89 *J C Amson* · Electrode voltage in the consumable-electrode arc system

97 *R J Dewhurst, G J Pert and S A Ramsden* · Picosecond triggering of a laser-triggered spark gap

104 *A W Howatson and R D Rowe* · An arc column in forced axial convection

119 *I Paulus, R Holmes and H Edels* · Vacuum arc response to current transients

133 *C B Wheeler* · The performance of electrical fuses under impulsive conditions: I—DC supplies

141 *M J King and N D Waters* · The unsteady motion of a sphere in an elastico-viscous liquid

151 *M Sato* · Effect of a magnetic field on the floating double-probe method (R)

Structure and Mechanical Properties of Solids

155 *S C Jain, B B Sharma and B K Reddy* · Thermal conductivity of metals at high temperatures by the Jain and Krishnan method: VI—Rhodium

160 *S Hart and R W H Stevenson* · The elastic constants of manganese fluoride (R)

Electrical and Magnetic Properties of Solids

162 *D K Davies* · Carrier transport in polythene

169 *D Robson, F Y I Assabghy and D J E Ingram* · Some electronic properties of polyacrylonitrile-based carbon fibres

180 *T G Blaney and C C Bradley* · The Josephson junction as a frequency analyser and mixer of submillimetre radiation sources
185 *R Hill, D Richardson and S Wilson* · Ohmic contacts on semiconductors using indium amalgam (R)
188 *W N Honeyman and M K Lee* · Properties of mixed crystals of triglycine sulphate and selenate
193 *G P Srivastava, P C Mathur and Arun Kumar* · Microwave Faraday rotation in artificial dielectrics at room temperature
200 *R Carey and B W J Thomas* · The effect of inclusion energy on domain nucleation at inclusions in uniaxial materials
203 *D O'Kelly* · Flux penetration in a ferromagnetic material including hysteresis and eddy-current effects

Laboratory and Experimental Techniques
214 *J B Irving* · The effect of nonvertical alignment on the performance of a falling-cylinder viscometer

NO 2 FEBRUARY 1972

LETTERS TO THE EDITOR

L9 *S J B Reed : G L Fisher* · Comments on 'An investigation of electron probe microanalysis corrections in nickel–cobalt alloys'

PAPERS AND RESEARCH NOTES

Electromagnetism
225 *H M Barlow* · Measurements of dispersion in dielectric-loaded submarine telephone cable

Quantum Electronics, Quantum Optics
228 *I J Barton and D W Goodwin* · Continuous laser action in $YAlO_3$

Fluids, Plasmas and Gas Discharges
235 *P D Francis* · Multimode cavity for simultaneous plasma excitation and electron density measurements
241 *C H Gillen and R W Young* · Beam–plasma interaction and the low-pressure mercury hollow cathode discharge
253 *M M Kekez, M R Barrault and J D Craggs* · Spectroscopic investigation of the spark channel
266 *J Polman, J E van der Werf and P C Drop* · Nonlinear effects in the positive column of a strongly modulated mercury–rare gas discharge
280 *D W Williams and W T Williams* · Field-emitted current necessary for cathode-initiated vacuum breakdown
291 *I A Fleming, D R Gray and J A Rees* · The drift and diffusion of electrons in oxygen containing traces of hydrogen
297 *J Schweitzer and B R Jennings* · Transient scattering changes induced by pulsed sinusoidal electric fields
310 *B W Walsh* · Low-velocity flows through plasmas (R)
314 *J R Riley* · Axial electron density gradients in steady-state and modulated mercury positive columns (R)

Structure and Mechanical Properties of Solids
319 *A J Hunter* · On the distribution of asperity hieghts of surfaces
325 *H A Chedzey and D S Robertson* · A study of periodic crystal rotation reversal in melt growth
331 *H G Allen* · The strength of thin composites of finite width, with brittle matrices and random discontinuous reinforcing fibres
344 *R G C Arridge and M J Folkes* · The mechanical properties of a 'single crystal' of SBS copolymer—a novel composite material
359 *R A Hunt and B Gale* · A model of deadherence due to stresses in an elastic film
373 *P Stanley* · A determination of the effect of the relatively large strains in photoelastic pressure vessel models

386 *A R Patel and C C Desai* · Kinetics of the etching of dislocations in doped calcium fluoride single crystals (R)
390 *A R Patel and K John Mathai* · Etch hillocks on carbon faces of α SiC (R)

Electrical and Magnetic Properties of Solids
394 *M Kent* · Complex permittivity of protein powders at 9·4 GHz as a function of temperature and hydration
410 *D B Watson* · The elastic strength of Perspex as a function of voltage rise time
415 *J H Davis* · Energy changes in magnetization of ferromagnetics in low and moderate fields
440 *D C Hothersall, G A Jones and P J Grundy* · The detection of bubble domains in $YFeO_3$ by scanning electron microscopy
443 *S Chandra, H B Lal and K Shahi* · Thermoelectric properties of high-conductivity solid electrolyte KAg_4I_5 (R)

Spectroscopy and Optical Properties of Solids
446 *R V Joshi and T R Joshi* · Thermoluminescence of x-irradiated NaCl : Tl (R)
448 **Corrigenda**

NO 3 MARCH 1972

LETTERS TO THE EDITOR

L13 *T M Christmas* · Laser-induced self-focusing in ADP and KD*P
L17 *E Sacher* · The DC conductivity of poly(ethylene terephthalate) at elevated temperatures
L18 *J R Birch and R G Jones* · Submillimetre wave modulation by free carrier absorption in germanium

PAPERS AND RESEARCH NOTES

Mechanics, Elasticity, Vibration, Acoustics
449 *B Campbell, H K Messerle and A D Stokes* · Shock collision in preheated argon

Electrodynamics and Particle Optics
461 *F Watt* · The crossed-field injection of medium energy electrons into high homogeneous magnetic fields

Quantum Electronics, Quantum Optics
468 *J M Austin and A L S Smith* · Analysis of positive ions in CO_2 gas laser systems

Optics
476 *B J Brinkworth* · A scattering efficiency factor for radiative transport
481 *L E Drain* · Coherent and noncoherent methods in Doppler optical beat velocity measurement
496 *G D Holah and S D Smith* · Multi-element mesh interference filters for the infrared
510 *J V Champion, G H Meeten and M D R Tench* · Method of obtaining concurrent measurements of circular and linear birefringence (R)

Atomic and Molecular Physics
514 *J E Parr and J L Moruzzi* · Electron attachment in water vapour and ammonia

Fluids, Plasmas and Gas Discharges
525 *M R Barrault and A D Craig* · Magnetic diffusion into a moving cylindrical incompressible plasma
533 *D R Topham* · The characteristics of axial flow electric arcs subject to pressure gradients
542 *L E Virr, J Lucas and N Kontoleon* · The measurement of the ratio of diffusion coefficient to mobility for electrons at low E/p
555 *J D E Beynon* · An experimental comparison of two theories of non-equilibrium ionization in gases
562 *P C Drop and J Polman* · Calculations on the effect of supply frequency on the positive column of a low-pressure Hg–Ar AC discharge
569 *T Kelsey* · Measurements of prebreakdown current and x ray emission in vacuum

575 *E Kuffel, S Grzybowski and R B Ugarte* · Flashover across polyethylene and tetrafluoroethylene surfaces in vacuum under direct, alternating and surge voltages of various waveshapes
580 *P E Secker, C C Sanger and T J Lewis* · Behaviour of low-current arcs on moving electrodes
589 *D Bourgoin, E Volf et M Joly* · Mesure de la permittivité complexe relative en ondes centimétriques de liquides fortement polaires: Application à l'eau et au diméthylsulfoxyde
601 *J F Bitó and K G Antal* · On the breakdown phenomena of capacitive discharges (R)

Structure and Mechanical Properties of Solids
604 *D S Robertson* · Crystal growth from aqueous solution by the Bridgman method
609 *S K Chatterjee and S P Sen Gupta* · An integral breadth analysis for particle size and strain determinations in cold-worked FCC alloys

Electrical and Magnetic Properties of Solids
613 *P H Melville* · AC loss and flux instabilities in single-component and double-component type II superconductors
628 *J Sutton and D A Ward* · The determination of low-field critical current densities from magnetization data for Nb–25% Zr
639 *R Swami and B A P Tantry* · Effect of an intense magnetic field on the diffusion of minority carriers in semiconductors
647 *D L Pulfrey* · The electrical breakdown of solid dielectrics in non-uniform fields
656 *R V Bellau and A E Widdowson* · Some properties of reverse-biased silicon carbide p–n junction cold cathodes

Spectroscopy and Optical Properties of Solids
667 *D Kalymnios* · Linear electro-optic (Pockels) effect in m-nitroaniline ($C_6H_4(NO_2)NH_2$) (R)
670 *A M Stoneham* · Linewidths with gaussian and lorentzian broadening (R)

NO 4 APRIL 1972

LETTERS TO THE EDITOR

L23 *E R Pike* · The application of photon correlation spectroscopy to laser Doppler measurements
L25 *C H Gooch and H A Tarry* · Dynamic scattering in the homeotropic and homogeneous textures of a nematic liquid crystal
L29 *J R Bosnell and C B Thomas* · Switching in amorphous elemental semiconductors, Si and Ge

PAPERS AND RESEARCH NOTES

Mathematical Physics
673 *P L Hall* · Errors in the determination of ESR spin concentrations by numerical double integration (R)

Electromagnetism
676 *J H Davis* · Energy changes in magnetization of ferromagnetics and ferrimagnetics: an interpretation of three reported effects
681 *J H Davis* · Energy changes in magnetization of a nickel–silicon alloy

Quantum Electronics, Quantum Optics
686 *R Illingworth* · The effect of small concentrations of nitrogen on an argon *Z*-pinch laser and the measurement of the inversion ratio

Fluids, Plasmas and Gas Discharges
693 *P B Barber, D A Swift and B A Tozer* · The formation of rotating plasmas in a homopolar configuration
701 *J F Humphreys and J Lawton* · Arcs with free anode roots in the presence of gas flow and magnetic fields
710 *K R Hearne, S A Nixon and D Whittaker* · Axial temperature distributions along thin graphite electrodes
717 *M K Bevir* · The effect of conducting the pipe connections and surrounding liquid on the sensitivity of electromagnetic flowmeters

730 *J K Hepworth, R C Klewe and B A Tozer* · A model of impulse breakdown in divergent field geometries
741 *M S Naidu, A N Prasad and J D Craggs* · Electron transport, attachment and ionization in c-C_4F_8 and iso-C_4F_8
747 *T R Hewish and J E Brignell* · Experimental consequences of the EHD stability criterion for dielectric liquids
753 *C Pounder* · Electrification from salt water on heated metals (R)

Structure and Mechanical Properties of Solids
756 *T Terada* · Aluminium ionimpression onto gallium arsenide
767 *S Pehkonen, M Ahtee and O Inkinen* · Formation of mixed crystals in equimolar KCl–KBr powder mixtures
774 *I V K Bhagavan Raju, V Hari Babu and K G Bansigir* · Impurity-enhanced dissolution studies on NaCl crystals
777 *J L Chevalier, P Peguin, J Perez and P Gobin* · Frottement intérieur de l'aluminium très faiblement écroui
782 *C G Brown, N L Hancox and W N Reynolds* · Nondestructive testing of carbon-fire-reinforced plastics—a study of an ultrasonic resonance method
793 *C F Clement* · The distribution of path lengths through a porous material
799 *S Nichols* · A bismuth triple point at 41 kbar, 175°C

Electrical and Magnetic Properties of Solids
803 *A R Peaker and A Mottram* · Injection and quantum efficiencies of red-light-emitting gallium phosphide diodes
810 *D E Lacklison, J Chadwick and J L Page* · Photomagnetic effect in ferric borate
822 *T E Gallon* · The estimation of backscattering effects in electron-induced Auger spectra
833 *M J Chockalingam, K Nagaraja Rao, N Rangarajan and C V Suryanarayana* · Photoconductivity in thallous sulphide binder layers (R)

Spectroscopy and Optical Properties of Solids
837 *L F Gate* · Light scattering in microporous materials using a photon diffusion model
847 *S G Tomlin* · More formulae relating to optical reflection and transmission by thin films
852 *R E Denton, R D Campbell and S G Tomlin* · The determination of the optical constants of thin films from measurements of reflectance and transmittance at normal incidence

864 **Corrigenda**

NO 5 MAY 1972

LETTERS TO THE EDITOR

L33 *M Nashed* · Solution of the electromagnetic flowmeter equation
L37 *D J Craik and P V Cooper* · Derivation of magnetic parameters from domain theory and observation
L40 *E R Vance, H J Milledge and A T Collins* · The effect of heavy neutron irradiation on the electrical resistivity of diamond
L43 *G T Kanfer and R A Giblin* · Threshold conditions of TRAPATT operation

REVIEW ARTICLE

865 *K Hulls and P W McMillan* · Amorphous semiconductors: a review of current theories

PAPERS AND RESEARCH NOTES

Mechanics, Elasticity, Vibration, Acoustics
883 *L S Srinath and A V S S S R Sarma* · Effects of stress-induced optical activity in photoelasticity

Electrodynamics and Particle Optics
896 *P T Bolwijn and R A van Doorn* · On the selective erasure of cathodochromic image displays

Quantum Electronics, Quantum Optics
901 *R K Garnsworthy* · The pressure-dependent performance of a transversely excited pulsed CO_2 laser
904 *P R Selway and A R Goodwin* · The properties of double heterostructure lasers with very narrow active regions

Optics
915 *P B Coates* · Photomultiplier noise statistics

Nuclear Physics
931 *T D Beynon and J R Moon* · Thermal neutron transport near a moderator discontinuity using the method of weighted residuals—I. Theory

Fluids, Plasmas and Gas Discharges
950 *M Nashed and M A K Moustafa* · A method for induction velometry
956 *N Kontoleon, J Lucas and L E Virr* · The measurement of the ratio of radial diffusion coefficient to mobility and the amplification coefficient for electrons at high E/p
966 *A B Birtles and J R Travis* · A method for the computation of characteristics of a Townsend discharge
973 *J R Travis and A B Birtles* · Analysis of a hemispherical corona tube
983 *M S Naidu and A N Prasad* · Mobility, diffusion and attachment of electrons in perfluoroalkanes
994 *E H Pinnington and P H L Pang* · Magnetic enhancement of ionic spectra excited in the interrupted vacuum arc (R)

Electrical and Magnetic Properties of Solids
1000 *C Munakata* · Improvement of the β-conductive method of measuring electric field intensity in semiconductors by a pulsed electron beam
1005 *I M Green and P Hlawiczka* · Surface impurities and the superconducting-to-normal transition—theory
1016 *I M Green and P Hlawiczka* · Surface impurities and the superconducting-to-normal transition—experiments on tantalum
1027 *P K Pillai, K G Balakrishnan and T N R K Kurup* · A study of the electret properties of *Vateria Indica*
1031 *A S Hudson* · Substituted calcium–vanadium garnets as potential microwave materials
1038 *Y Awakuni and J H Calderwood* · Water vapour adsorption and surface conductivity in solids

Laboratory and Experimental Techniques
1046 *A E Curzon, R P Berman and T S Luhman* · A simple technique for removing (111) Cu or Ag single-crystal films from mica and their use in Moiré fringe electron microscope calibration specimens (R)

NO 6 JUNE 1972

LETTERS TO THE EDITOR

L47 *G Hooper* · Microwave measurement of electron density in a plasma column contained in a dielectric tube
L52 *G W Taylor: Y W Lam and E H Rhoderick* · Comments on 'Surface-state density by photovoltage measurements—II'

PAPERS AND RESEARCH NOTES

Electromagnetism
1049 *H M Barlow* · Screened surface waves of the dipole family in a coaxial waveguide

Quantum Electronics, Quantum Optics
1063 *J E Creeden, R M Fristrom, C Grunfelder and F J Weinberg* · A large-area differential laser interferometer for fire research

Fluids, Plasmas and Gas Discharges
1068 *E W Gray, J R Pharney and J A Augis* · Cathodic contact erosion due to short-duration gas breakdown arcs
1077 *A C Metaxas and J R Cozens* · The influence of metastable atoms and molecules on the re-ignition of high-frequency discharges
1090 *M S Naidu and A N Prasad* · Diffusion and drift of electrons in SF_6
1096 *J Berghmans* · Stability of a gas–liquid interface and its relation to weld pool stability
1106 *A W Palmer and H House* · A statistical analysis of the light pulses emitted before electrical breakdown of a liquid dielectric
1111 *J K Nelson and P B McGrath* · The effect of stress-induced motion on the conduction current statistics of liquid dielectrics
1117 *D J Mellor and J R Travis* · Determination of ion species in a hydrogen corona discharge between concentric hemispheres (R)
1120 *J C Manaranche* · Application des cristaux liquides au controle nondestructif (R)

Structure and Mechanical Properties of Solids
1123 *H J Arnikar, P S Damle and B D Chaure* · 'Aquoluminescence' from γ-irradiated crystals: effect of isothermal annealing (R)

Electrical and Magnetic Properties of Solids
1127 *W L V Price* · Extension of van der Pauw's theorem for measuring specific resistivity in discs of arbitrary shape to anisotropic media
1133 *M C Lancaster* · AC electrical properties of evaporated cerous fluoride films
1146 *T L Tansley* · Temperature dependence of hole diffusion length from spectral response of Au–n^+ GaAs photodiodes
1153 *A E Guile* · Stored charges in relatively thin oxide films (R)
1157 *S Rafi Ahmad and D Walsh* · Photoelectric emission from metal surfaces (R)

Spectroscopy and Optical Properties of Solids
1160 *T Kodama* · An improved method for the calculation of the thickness and the optical constants of a thin film by ellipsometry
1164 *M J Rossiter, D B Rees-Evans and S C Ellis* · Thermoluminescence in lithium fluoride: apparent activation by manganese
1168 *V Čerić* · Investigation of DC electroluminescent characteristics of CdS : Cu powder phosphors (R)
1173 *V Čerić and Z Ogorelec* · Investigation of the AC electroluminescence of CdS : Cu powder phosphors (R)

Laboratory and Experimental Techniques
1177 *J Müller, B Singh and N A Surplice* · The gettering action of evaporated films of titanium and erbium

NO 7 JULY 1972

LETTERS TO THE EDITOR

L55 *Mino Green, W Gee, A Levy and P Ming* · Electrical changes in the surface region of chalcogenide glasses
L59 *E B Pattinson and P R Harris* · Secondary electron spectroscopy of polycrystalline silver

PAPERS AND RESEARCH NOTES

Electromagnetism
1185 *K Asano and A W Bright* · On the theory of charge collection in electrostatic generators
1199 *K Cornwell* · The thermoelectric potential of molten salt thermocells

Quantum Electronics, Quantum Optics
1212 *J P Lesieur, M C Sexton and D Veron* · Gain and visualization of the modes of a thermally stabilized HCN laser

Optics
1218 *C H Gooch and J J Low* · Matrix-addressed liquid crystal displays

Fluids, Plasmas and Gas Discharges
1226 *D Smith and I C Plumb* · An appraisal of the single Langmuir probe technique in the study of afterglow plasmas
1239 *L Harrison and J L Moruzzi* · Ion mobilities and ion–molecule reaction rates in oxygen
1249 *D A Price, J Lucas and J L Moruzzi* · Ionization in oxygen–hydrogen mixtures
1260 *S N Sen, R P Das and R N Gupta* · Spectral line intensity in a glow discharge in a transverse magnetic field
1267 *A A W M Garamoon and N A Surplice* · Secondary ionization coefficients in a low-pressure discharge in mercury vapour

Structure and Mechanical Properties of Solids
1274 *R D Adams and M A O Fox* · Measurement of the damping capacity and dynamic modulus of high-damping metals under direct cyclic stresses
1284 *C A Brookes, P Green, P H Harrison and B Moxley* · Some observations on scratch and indentation hardness measurements
1294 *A L Wingrove* · The forces for projectile penetration of aluminium
1304 *S C Lakkad, B B Miatt and B Parsons* · The thermal conductivity of a statistically isotropic heterogeneous medium
1321 *A F Pojur, B Yates and B T Kelly* · Thermal expansion at elevated temperatures: III—A hemispherical laminar composite of pyrolytic graphite, silicon carbide and its constituents between 300 and 800 K

Electrical and Magnetic Properties of Solids
1330 *G D Pitt, J H McCartney, J Lees and D A Wright* · The electrical and phase properties of Hg_3Te_3–In_2Te_3 alloys to high pressures
1334 *W Heinle* · Instabilities in semiconductors with negative differential mobility
1349 *K Mehmet and M K McPhun* · A microwave relaxation phenomenon in electron-beam-evaporated films of SiO
1352 *H J Goldsmid, N Savvides and C Uher* · The Nernst effect in Cd_3As_2–NiAs
1358 *D M Jacobson and M E Ertl* · Phonon drag thermomagnetism in bismuth at low temperatures
1368 *D K Das Gupta and M E Tindell* · Anomalous photo-induced current transients in polyethylene

Laboratory and Experimental Techniques
1374 *L G Carpenter and M J Watts* · Estimation of the conductance of channels for rarefied gas flow by means of an optical analogue

NO 8 AUGUST 1972

LETTERS TO THE EDITOR

L67 *T Geszti, I Gaal, T Deutsch and I Hangos* · Thermodynamical studies of halogen lamps
L69 *T E Gallon and J A D Matthew* · Comparison of x ray and electron impact ionization in Auger spectroscopy
L73 *A A Collyer and D J Ayres* · The generation of sound in a Rijke tube using two heating coils

PAPERS AND RESEARCH NOTES

Electromagnetism
1377 *R D Gibson and J Caldwell* · Optimization of field uniformity in the bore of a toroidal conductor
1389 *G Manson and G Hoffmann de Visme* · The frequency spectrum of Barkhausen noise

Electrodynamics and Particle Optics
1396 *A B Birtles* · Efficient charged particle trajectory calculations in time-varying laplacian fields

Quantum Electronics, Quantum Optics
1405 *D Andreou, A C Selden and V I Little* · Amplification of mode-locked trains with a liquid laser amplifier, Nd^{3+} : $POCl_3$: $ZrCl_4$
1418 *L J Challis and N F Price* · An investigation of a possible correlation between the laser output of a ruby rod and the chromous ion concentration (R)

Fluids, Plasmas and Gas Discharges
1422 *B Bowman* · Measurements of plasma velocity distributions in free-burning DC arcs up to 2160 A
1433 *E E Mainwaring and J D Swift* · Determination of the average electron energy in the positive column of an He–Ne glow discharge
1438 *P de Montgolfier* · Laser-induced gas breakdown : electron cascade
1448 *W Reininghaus* · The influence of secondary avalanches on the development of the cathode-directed streamer
1453 *R K Khanna and J Sobhanadri* · Dielectric properties of some acrylates (monomers) in the microwave region—I
1457 *B Singh, W G Chadband, C W Smith and J H Calderwood* · Prebreakdown processes in electrically stressed insulating liquids
1465 *R J Taylor and H House* · The electrohydrodynamic interaction of two injection diodes in a closed-loop liquid system

Electrical and Magnetic Properties of Solids
1469 *A S Yadav and R Parshad* · A formula for dielectric correlation between powder and bulk over wide ranges of permittivities and packing fractions (R)
1474 *R H Kulkarni and S G Ingle* · The dielectric constant of $KNbO_3$ single crystals under biasing conditions

2301 SUBJECT INDEX 1972

2314 AUTHOR INDEX 1972 (with titles)

Journal of Physics D: Applied Physics
1972, Volume 5

Subject index

Abrasion
resistance of diamond to 1902–19
Absorption: *see also Neutrons*
coefficients, elongated particles L1–4
water vapour in solids, and surface conductivity 1038–45
Acoustics
application to jet engine noise reduction 12–27
Acrylates
dielectric properties of 1453–6
Activation energy
aluminium–germanium contacts 1930–6
Adhesion
bonding, bimetallic 1890–7
critical stress model 359–72
Adhesives
viscoelastic flow in 1531–9
Afterglow plasmas: *see Plasmas*
Air
dry, ionization of L6–8
electrical breakdown 2055–63
pollution, effect on irradiance 1513–20
Alcohols
primary and secondary in heptane, dielectric properties 1815–23
Alloys
cold-worked FCC, integral breadth analysis 609–12
cold-worked, x ray profile analysis 1650–3
$Cd_x Pb_{1-x} Se$ and $Mg_x Pb_{1-x} Se$, transport and optical properties 1671–9
Hg_3Te_3–In_2Te_3, electrical and phase properties to high pressures 1330–43
Nb–Zr, superconducting properties 628–38
Ni–Fe in Hg, ferrofluids 2273–82
Ni–Si, energy changes in magnetization of 681–5
Aluminium
additives in ferrofluids 2273–82
film production by ion bombardment 756–66
ionimpression onto gallium arsenide 756–66
measurement of internal friction 777–81
projectile penetration 1294–303
Al–Ge contacts, activation energy 1930–6
B–Al, failure in 2075–86
Ammonia: *see Nitrogen compounds*
Amplifier
liquid laser 1405–17
Anisotropy
anisotropic material, resistivity in 1127–32
Annealing
effect on 'aquoluminescence' of crystals 1123–6
Anodes
anode root, effect of magnetic fields 701–9
Arcs, electric
axial flow, characteristics of 533–41
cathodic contact erosion due to 1068–76
column in forced axial convection 104–18
constant pressure flow 1837–44
consumable-electrode arc system 89–96
electrode-dominated, power balance 2170–8
motion, magnetically induced 580–8
plasma velocity distributions in 1422–32
steady-state characteristics in axial flows 533–41
vacuum, magnetic enhancement of ionic spectra 994–9
vacuum, response to current transients 119–32
with free anode root 701–9
Argon
breakdown threshold L97–9
capacitive breakdown in vapour 601–3
effect of supply frequency on Hg–Ar discharge 562–8
laser, effect of N_2 concentration 686–92
laser, segmented-metal 1807–14
momentum transfer cross section in 2037–43
shock collision in 449–60
Asperities
asperity height of surface 319–24
Atoms
angular spread of H_2 atom 69–78
influence on high-frequency discharges 1077–89
scattering of electrons 2095–104
Auger spectroscopy
backscattering effects 822–32
impact ionization L69–72

Barkhausen noise
frequency spectrum of 1389–95
Beta particles
β-conductive method, improvement of 1000–4
Birefringence
circular and linear measurements of 510–3
Bismuth
thermomagnetic measurements in 1358–67
triple point 799–802
volume change of Bi III 1898–901
Boron
ions in Si crystal, measurement 1654–63
B–Al failure mechanisms 2075–86
Boron compounds
borate glass, stimulated emission 1788–99
Breakdown, electric: *see also Discharges, electric; Electric strength*
air, divergent field geometries 730–40
argon and mercury 601–3
gases, cathodic contact erosion due to 1068–76
gases, development of cathode-directed streamer 1448–52
gases, influence of atoms and molecules 1077–89
gases, initiated by a large number of electrons 2055–63
gases, laser-induced 1438–47
gases, using pulsed radiation impulse, in divergent field geometrics 730–40
insulating liquids 1457–69
liquid dielectrics 1106–10
polyethylene and tetrafluoroethylene 575–9
solid dielectrics in non-uniform fields 647–55
vacuum, by microparticle impact 2044–54
vacuum, cathode-initiated 280–90
vacuum, effect of electrode surface 1845–54
vacuum, effect of temperature 1588–91
vacuum, prebreakdown current 569–74
H_2O films exposed to 2064–7
NaCl L83–9

Cable
submarine telephone, dispersion in 225–7
Cadmium compounds
Cd_3As_2–NiAs, Nernst coefficient 1352–7
$Cd_xPb_{1-x}Se$, properties 1671–9
CdS, conduction and electroforming 1686–91
CdS, optoelectronic properties 1692–9
CdS, photoconductivity 1945–50
CdS : Cu, electroluminescence 1168–72, 1173–6
CdS–Cu_2S, photovoltaic cells 1700–11
Calcium compounds
calcium–vanadium garnet as microwave material 1031–7
CaF_2 dislocations 386–93
Carbon
fibre, electron diffraction 1596–603
fibre, electronic properties 169–79
fibre-reinforced material 2215–25
fibre-reinforced plastic 782–92
Carbon compounds
C_4F_8, electric transport, attachment and ionization in 741–6
CO_2 lasers: *see Lasers*
Carrier mobility
n-hexane 2212–4
Cathode ray tubes
for image displays 896–900
Cathodes
cold, SiC p–n junctions 656–66
contact erosion, due to gas breakdown arcs 1068–76
hollow, discharge 241–52
initiated vacuum breakdown, field-emitted current 280–90
poisoning 1829–30
Cellulose acetate
surface conductivity of 1038–45
Centrifuges
centrifugal particle size analysis 1962–8
Cerium compounds
cerous fluoride films, electrical properties 1133–45
Channel electron multiplier
space-charge saturation in 1769–79
Charged particles
trajectory calculations of 1396–404
Chromium
concentration in ruby lasers 1418–21
Coaxial systems
cable, dispersion in 225–7
line system, automated 1576–87
waveguide, screened surface waves in 1049–62
Coherence: *see Lasers*
Composite material
mechanical properties 331–43, 344–58, 2215–25
thermal expansion 1321–9
B–Al, failure in 2075–86
Conductance
channels, molecular flow estimation 1374–6

Conductivity, electrical: *see also Semiconducting materials; Semiconductors; Superconductors*
chalcogenide glasses L55–8
iodine-doped polythene 1664–70
liquid dielectrics 1111–6
poly (ethylene terephthalate) L17–22
resistivity of diamond, effect of neutrons L40–2
resistivity, measurement of 1127–32
Schottky diode 1920–9
sulphide film 1686–91
surface, in solids 1038–45
surfaces, and water absorption 1038–45
Hg–Te–In alloy resistance 1330–43
Conductivity, thermal
isotropic heterogeneous medium 1304–20
Contact angle
deuterium oxide 1870–3
Contact, electrical
erosion, cathodic 1068–76
material, In–Hg 185–7
potential, measurement 1829–30
semiconductors 185–7
Convection
flow in constant pressure axial flow electric arc 1837–44
Convolution procedure
for determination of ^{18}O diffusion 2292–9
Copolymers: *see Polymers*
Copper
contact angle with deuterium oxide 1870–3
film removal 1046–8
hardness of 1284–93
Copper compounds
alloys, instrumental profile 1650–3
CdS doping 1692–9
CdS : Cu phosphors, electroluminescent characteristics of 1168–72, 1173–6
CdS–Cu_2S photovoltaic cells 1700–11
Corona discharge
ion species in 1117–9
tube, design 973–82
H_2, determination of ion species in 1117–9
Cracks
detection method after welding 1120–2
Crystals
growth, from aqueous solution 604–8
liquid, application to nondestructive testing 1120–2
liquid, matrix-addressed displays 1218–25
liquid, nematic, scattering in L25–9
powder diffraction identification 1874–6
rotation, reversal in melt growth 325–30
single, etching of dislocations in doped CaF_2 386–93
whisker, microtensile testing of 1531–9
α-SiC, etch hillocks 390–3
γ-irradiated, aquoluminescence 1123–6
CdS–Cu_2S photovoltaic cells 1700–11
KCl–KBr, formation of 767–73
$KNbO_3$, surface-charge layers 1937–44
NaCl, dissolution studies on 774–6
Si, measurement of boron ions 1654–63
Current, electrical
field-emitted, for cathode-initiated breakdown 280–90
prebreakdown in vacuum 569–74
vacuum arc response to 119–132
Cyclotron
electron resonance heating 1861–4

Damping
capacity measurement 1274–83
element characteristic determination L77–8
ferromagnetic materials 1877–89
Daylight
spectral irradiance of L85–8 (C2300), 1513–20
Detonation
wave, velocity measurement 1561–75
Deuterium compounds
deuterium oxide, contact angle of 1870–3
Diamond
abrasion resistance 1902–19
electrical resistivity of L40–2
Dielectrics
acrylates, properties 1453–6
artificial, microwave Faraday rotation in, at room temperature 193–9
correlation between powder and bulk 1469–73
dimethylsulphoxide 589–600
dispersion, H_2O structure 589–600
electrical breakdown in non-uniform fields 647–55
homogeneous propagation in 1049–62
laser-induced damage in L13–6
liquid, conduction current statistics of 1111–6
liquid, determination of permittivity 1576–87
liquid, electrical breakdown 1106–10
liquid, electrohydrodynamic stability 747–52
loading in coaxial cables 225–7
particles, scattering by 476–86
protein powders 394–409
relaxation of alcohols in heptane 1815–23

submarine telephone cable 225–7
thin film, CeF_3, electrical properties 1133–45
thin film, SiO, microwave relaxation in 1349–51
tube, plasma column in L47–51
water 589–600
$KNbO_3$, dielectric constant of 1474–7
NaCl, electrical breakdown L83–4
Diffraction, x ray: *see x rays*
Diffusion
concentration-dependent 1592–5
electrons in gases 542–54
electrons in perfluoroalkanes 983–93
electrons in SF_6 1090–5
electron swarms 956–65
holes in GaAs 1146–52
magnetic field, into incompressible plasma 525–32
solutes, coefficient 297–309
Diodes
injection, electrohydrodynamic interaction 1465–8
purity assessment 2266–72
Schottky, activation energy 1930–6
Schottky, conduction in 1920–9
GaAs, LSA, purity evaluation 2266–72
GaP, efficiencies 803–9
Discharges, electric: *see also Arcs, electric; Breakdown, electric; Plasmas; Sparks, electric*
air, streamer propagation, computer model 2179–89
argon-jet-guided 2190–4
cathode-directed streamer, influence of secondary avalanches on 1448–52
characteristics of Townsend discharge, computation 966–72
gases at high E/p 956–65
glow, in transverse magnetic field 1260–6
glow, photoemission 1712–9
high-frequency, influence of metastable atoms and molecules on reignition of 1077–89
photoemission from electrodes 1712–9
plasma columns from 1865–9
transverse magnetic field 1260–6
He–Ne, electron energy in 1433–7
Hg, electron density gradients 314–8
Hg, low-pressure, hollow-cathode 241–52
Hg, low-pressure, ionization coefficients 1267–73
Hg–rare gas mixture 266–79
Hg, vapour density variations 2161–9
Hg–Ar, AC, effect of supply frequency on positive column 562–8
Dispersion
measurement in telephone cable 225–7
Domains
bubble, $YFeO_3$, by scanning electron microscopy 440–52
theory, derivation of magnetic parameters from L37–9
uniaxial materials, nucleation, effect of inclusion energy 200–2
$LiNbO_3$ crystals 1680–5
Si–Fe 1720–6
Doppler effect
optical beat, velocity measurement 481–95
shifting of laser light 1561–75
signals, measurement of L23–5

Elastic constants: *see also Stress*
MnF_2 160–1
Elastic films
tensile stresses in 359–72
Elastic parameters
liquids, determination 141–50
Elastico-viscous liquid
unsteady motion of sphere in 141–50
Elastohydrodynamics
lubrication, theory of 2195–211
Electrets
thin films 1153–6
Vateria Indica 1027–30
Electric fields
applied to macromolecules 297–309
intensity, in semiconductors 1000–4
trajectory of particles in laplacian fields 1396–404
Electric strength
Perspex 410–4
Electrical breakdown: *see Breakdown, electric*
Electrical conduction: *see Conductivity, electrical*
Electrification
from salt water on heated metals 753–5
Electrodes
consumable, in arc system 89–96
erosion, spark discharge in 2190–4
graphite, temperature distributions along 710–6
moving, behaviour of low-current arcs on 580–8
surface condition, effect on breakdown 1845–54
surface condition, microparticle charge requisition 2044–54
voltage in consumable-electrode arc system 89–96

Electroforming
in sulphide films 1686–91
Electrohydrodynamics: *see also Magneto-hydrodynamics*
closed-loop liquid system 1465–8
method for induction velometry 950–5
stability of dielectric liquids 747–52
Electroluminescence
CdS : Cu powder phosphors 1168–72, 1173–6
Electromagnetic field
boundary conditions, laminar 2145–51
Electron beams
in semiconductors, for measuring electric field intensity 1000–4
Electron diffraction
from carbon fibres 1596–603
Electron microscopes
calibration of 1046–8
deconvolution 1760–8
experimental errors 1780–7
Moiré fringes, calibration specimens 1046–8
Electron probe analysis
thin films 1502–12
Ni–Co alloys L9–11
Electron spin resonance
determination errors 673–5
Electrons
attachment, in water vapour and ammonia 514–24
Auger, electron-induced, backscattering effects 822–32
backscattering from solid targets 1969–81
cascade 1438–47
channel electron multipliers, space-charge saturation in 1769–79
cyclotron resonance heating 1861–4
density along mercury positive column 314–8
density measurement L47–51, 235–40
diffusion in gases 291–6, 542–54, 956–65
drift in oxygen 291–6
drift in SF_6 1090–5
energy, determination of 1433–7
energy distribution 1438–47
energy exchange processes on cathode surface 280–90
impact ionization, in Auger spectroscopy L69–72
injection of electrons into high magnetic fields 461–7
multiplication above breakdown 966–72
penetration and energy-loss theory of 43–58
perfluoroalkanes 983–93
photoemission in glow discharges 1712–9
scattering by atoms in thin films 2095–104
secondary electron emission 1727–42
temperatures, in lasers 1807–14
thermionic emission from photocathodes 1489–98
transport in C_4F_8 741–6
Electro-optics
germanates 2124–8
matrix-addressed liquid crystal displays 1218–25
$C_6H_4(NO_2)NH_2$ 667–9
Electrostatics
generator, charge collection in 1185–98
Ellipsometry
thin films 1160–3
Emission
radiation by elongated particles L1–4
Energy analysers
experimental error 1780–7
Energy loss
theory of electrons in solid targets 43–58
Energy transfer
from plasma torches 79–88
Erbium
ions, cross section 1788–99
films, gettering action 1177–84
Eutectics
artificial dielectrics, microwave 193–9
Cd_3As_2–NiAs, Nernst effect in 1352–7

Faraday effect
n-Ge, microwave effect 1957–61
Fatigue
glass-reinforced plastics 1637–49
Ferrimagnetics
energy changes in magnetization of 676–80
Ferrites
spin-wave transit time in L93–6
Ferrofluids: *see Iron alloys and compounds*
Ferromagnetic material
damping 1877–89
eddy-current effect 203–13
energy changes in magnetization of 415–39, 676–80
flux penetration 203–13
hysteresis 203–13
magnetostriction 1604–13
Fibres
carbon, electronic properties of 169–79
low-angle diffraction from 1596–603
reinforced material, mechanical properties 344–58, 221–525

reinforced materials, testing by ultrasonic resonance 782–92
tensile strength of thin composites 331–43
Field-ion microscopy
fracture of specimens 2226–30
Films, thin: *see Thin films*
Filters, interference
for the infrared 496–509
Fires
laser interferometer for fire research 1063–7
Flashover
values in vacuum 575–9
Flow pinch
continuous, in plasma 2026–36
Flowmeters, electromagnetic
equation, solution 33–6
sensitivity 717–29
Flux
magnetic, instability in superconductors 613–27
magnetic, penetration in ferromagnetic material 203–13
pinning in superconductor 2252–65
Fracture
field-ion microscope specimens 2226–30
Frequency analyser
Josephson junction as 180–4
Friction
internal, in Al 777–81
sliding, under negative load 2087–94
Fuses, electrical
performance under impulsive conditions 133–40

Gallium
surface structure after plastic deformation 2068–74
Gallium compounds
$Ga_xAl_{1-x}As$–GaAs–$Ga_xAl_{1-x}As$ lasers 2266–72
GaAs, aluminium films on 756–66
GaAs, LSA diode purity 2266–72
GaAs, photodiode, spectral response 1146–52
GaAs, transmission, photocathodes L89–92
GaP, diode, quantum efficiency 803–9
Garnets
substituted Ca–V garnets as potential microwave materials 1031–7
Gases: *see also Discharges, electric*
electron diffusion in 542–54
flow, arcs in the presence of 701–9
flow, effect on distribution of energy transfer in plasma torches 79–88
flow, rarefied, conductance of channels for 1374–6
interface with liquids, stability 1096–105
non-equilibrium ionization in 555–61
rare, mixture with Hg, discharge 266–79
Germanium
contact with aluminium, activation energy 1930–6
Faraday effect 1957–61
submillimetre wave modulation by free-carrier absorption L18–22
Germanium compounds
gemanates, electro-optic measurements on 2124–8
Gettering
action of evaporated films 1177–84
Glass
chalcogenide, electrical changes L55–8
fibre-reinforced materials, mechanical properties 2215–25
laser damage in 2105–14
machining L103–4
reinforced plastics, microdamage in 1621–36, 1637–49
stimulated emission 1788–99
stress-optic coefficient 2283–7
Glow discharges: *see Discharges, electric, glow*
Gold
Au–n^+GaAs photodiodes, spectral response 1146–52
Graphite
electrodes, axial temperature distribution 710–6
moderator 1521–30
silicon carbide composite, thermal expansion 1321–9

Hall effect
$Cd_xPb_{1-x}Se$, $Mg_xPb_{1-x}Se$ systems, determination of electrical properties 1671–9
Hg–Te–In alloy 1330–43
Halogen lamp
thermodynamics L67–8
Hardness
measurement, observations 1284–93
Heat transfer
theory 104–18
Helium
breakdown threshold in L97–9
He–Ne glow discharge, electron energy determination in 1433–7
Heptane
primary and secondary alcohols in 1815–23

Hexane
measurement of mobility 1855–60, 2212–4
Holes
diffusion in GaAs, temperature dependence 1146–52
Hollow cathode: *see Discharges, electric*
Hologram
computer-generated 1982–92
Hydrogen
atoms, formation by electron capture and dissociation 69–78
atoms, regular spread of 69–78
corona discharge, ion species in 1117–9
electrical breakdown 2055–63, L97–9
electron diffusion 542–54
spark discharge in 253–65
O_2–H_2 mixtures, ionization 1249–59
Hydrogen compounds
HCN laser, modes of 1212–7

Ignition
in drop-weight experiments 1540–53
Image eraser 896–900
Impact
kinetics in drop-weight experiments 1540–53
Indium compounds
amalgam for electrical contact on semiconductors 185–7
Induction
inductive circuit, fuses in 133–40
Infrared filters 496–509
Insulating liquid
prebreakdown processes in 1457–64
Interference
infrared filter 496–509
Interferometer
for fire research 1063–7
Schlieren, for measurement in shock waves 1561–75
Invar
magnetostriction 1951–6
Iodine
doping of polyethylene, electrical measurement by ion microprobe analyser 1654–63
Ion microprobe analyser
application to boron ions in silicon crystals 1654–63
Ionic spectra
magnetic enhancement of 994–9
Ionization
current multiplication L6–8
gases, experimental comparison of two theories 555–61
non-equilibrium, gases 555–61
non-uniform electric field L6–8
soot particles L4–6
Hg vapour, coefficients 1267–73
Townsend L79–81, 569–74
O_2–H_2 mixtures 1249–59
Ions
bombardment, for production of aluminium films 756–66
bombardment of metal surfaces 2231–51
boron in silicon, measurement 1654–63
chromous, in ruby laser 1418–21
mobility in oxygen 1239–48
nitrogen in glass machining L103–4
positive, in CO_2 lasers 468–75
reaction rates with molecules, in oxygen 1239–48
species, determination in hydrogen corona discharge 1117–9
sputtering, for glass machining L103–4
Iron alloys and compounds: *see also Steel*
$FeBO_3$, photomagnetic effect in 810–21
Ni–Fe in Hg, ferrofluids 2273–82
Si–Fe, domain theory 1720–6

Jet engines
noise reduction 12–27

Laminar region
electromagnetic condition 2145–51
Lamps
halogen, thermodynamics of L67–8
Langmuir probes
afterglow plasma study 1226–38
contact potential in a plasma, measurement 1829–36
determination of electron energy 1433–7
Lasers
action in $YAlO_3$ 228–34
anemometer L100–2
damage in glass 2105–14
Doppler signal L23–5
Doppler velocity measurement 1561–75
focusing in ADP and KD*P L13–6
induced gas breakdown 1438–47
interferometer for fire research 1063–7
Josephson junction response 180–4
light, plasma motion 1824–8
measurement of breakdown thresholds L97–9
ruby, chromium concentration 1418–21
spark gap triggering 97–103
Ar, segmented-metal, electron temperatures 1807–14
Ar, *Z*-pinch, effects of N_2
CO_2, analysis of positive ions 468–75
CO_2, damage to glasses, surface film effects 2105–14

CO_2, mode-locked, assessment by optical bridge 1800–6
CO_2, pressure dependence 901–3
CO_2, subsonic plasma motion 1824–8
$Ga_zAl_{1-z}As$–GaAs–$Ga_zAl_{1-z}As$ double heterostructure 2266–72
HCN, anodes, gain and visualization 1212–7
HCN, use in measurement of cooled-KDP temperature 1743–4
Nd^{3+} : $POCl_3$: $ZrCl_4$, amplification of anode-locked trains 1405–17
Nd^{3+} : $POCl_3$: $ZrCl_4$, characteristics 59–63
Lead
hardness 1284–93
in moderator 1521–30
Lead compounds
$Cd_zPb_{1-z}Se$ and $MgPb_{1-z}Se$, properties 1671–9
$5PbO.3GeO_2$, electro-optic measurement 2124–8
Light
partially coherent, resolution of a centrally obstructed circular aperture in 64–8
pulses, statistical analysis 1106–10
scattered, Doppler optical beat velocity measurement 481–95
scattering, effect of pulsed fields 297–309
scattering, microporous material 837–46
Liquids
gas–liquid interface, stability 1096–105
insulating, prebreakdown processes in 1457–64
Liquids, dielectric: *see Dielectrics*
Lithium compounds
LiF, thermoluminescence 1164–7
$Li_2O.GeO_2$, electro-optic measurement 2124–8
$LiNbO_3$, domain structure 1680–5
Lubrication
elastohydrodynamic 2195–211
Luminescence
'aquoluminescence' of crystals 1123–6

Magnesium compounds
$Mg_zPb_{1-z}Se$, electrical and optical properties 1671–9
Magnetic fields
coil, stress calculation 1745–59
diffusion into plasma 525–32
effect on arcs with free anode roots 701–9
effect on floating double-probe method 151–4
effect on ionic spectra 994–9
effect on minority carriers in semiconductors 639–46
glow discharge 1260–6
injection of electrons 461–7
single-layer cylindrical coil 1–5
toroidal conductor 1377–88
Magnetic susceptibility
solids without resonant nuclei 1499–501
Magnetization
derivation of magnetic parameters from domain theory and observation L37–9
ferromagnetics and ferrimagnetics, energy changes 676–80
ferromagnetics, energy changes 415–39
Ni–S alloy, energy changes 681–5
Si–Fe, domain interpretation 1720–6
Magnetohydrodynamics
induction velometry, a method for 950–5
Magnetostriction
ferromagnetic cubic materials 1604–13
measuring method 1951–6
Manganese
activation of LiF by 1164–7
Manganese compounds
MnF_2, elastic constants 160–1
Mechanical strength
whisker crystals 1531–9
Mercury
electron density along positive column 314–8
vapour, capacitive breakdown 601–3
vapour, condensation coefficient 2161–9
vapour, discharge, secondary ionization coefficients 1267–73
Hg–rare gas mixture, discharge 266–79
Hg–Ar, discharge, effect of supply frequency 562–8
Mercury compounds
Hg_3Te_3–In_2Te_3 alloys, electrical and phase properties to high pressures 1330–43
Metal surfaces
ion bombardment 2231–51
photoelectric emission from 1157–9
Metals
adhesion between, mechanism 1890–7
damping measurements in 1274–83
electrification from salt water on heated metals 753–5
Microanalysis
experimental error 1780–7
Microprobe analyser, ion: *see Ion microprobe analyser*
Microscopes, electron: *see Electron microscopes*

Microwaves
garnets as potential microwave materials 1031–7
measurements of electron density L47–51
relaxation in SiO films 1349–51
Molecules
influence on high-frequency discharges 1077–89
reactions with ions in oxygen 1239–48
scattering, estimation of 1374–6

Neodymium
Nd^{3+} : $POCl_3$: $ZrCl_4$ liquid lasers 59–63, 1405–17
Neon
electron energy in He–Ne discharge 1433–7
Nernst coefficient
Cd_3As_2–NiAs 1352–7
Neutrons
flux peturbations due to absorbing foils 6–11
flux peturbations due to infinite plane absorbers 1993–2014
irradiation of diamond L40–2
slowing down time in moderators 1521–30
thermal, transport near a moderator discontinuity 931–49
Nickel
magnetostriction 1951–6
Nickel alloys
Ni–Co, electron probe microanalysis L9–11
Ni–Fe, particles in ferrofluid 2273–82
Ni–Si, magnetization 681–5
Nickel eutectics
Cd_3As_2–NiAs, Nernst effect in 1352–7
Niobium alloys
Nb–25%Zr, low-field critical current densities 628–38
Nitroaniline
single-crystal, Pockels effect 667–9
Nitrogen
effect on argon laser 686–92
electrical breakdown 2055–63, L97–9
ionization coefficient L79–81
Nitrogen compounds
ammonia, electron attachment in 514–24
ammonium dihydrogen phosphate, laser-induced damage in L13–6
Noise
acoustic, in jet engines 12–27
Barkhausen, frequency spectrum of 1389–95
photomultiplier 915–30
Nondestructive testing
application of liquid crystals to 1120–2
Nuclear magnetic resonance
determination of static magnetic susceptibility 1499–501
Nuclear reactions
used for ^{18}O concentration measurements 2292–9
Nylon
glass-fibre-reinforced, mechanical properties 2215–25

Ohmic contact
semiconductors 185–7
Optical activity
in photoelasticity 883–95
Optical analogue
for estimation of conductance of rarefied-gas-flow channels 1374–6
Optical beating
of Doppler-shifted scattered light 481–95
Optical bridge
for CO_2 lasers 1800–6
Optical constants
method of obtaining 2288–91
thin films, by ellipsometry 1160–3
Optical elements
testing of 1982–92
Optical glasses
stress-optic coefficients in 2283–7
Optical properties
alloy systems 1671–9
Optical reflection
by thin films 847–51, 852–63
Optical transmission microscopy
thin films 1554–7
Optics: *see Light*
Optoelectronic properties
CdS 1692–9
Organic compounds: *see individual compounds*
Oxides
films, stored charges 1153–6
thickness, measurement by ^{18}O profiles 2292–9
Oxygen
drift and diffusion of electrons in 291–6, 2292–9
electrical breakdown 2055–63
ions, mobilities 1239–48
O_2–C_2H_2, shock-wave velocity measurement 1561–75
O_2–H_2, ionization in 291–6, 1249–59

Palladium
contacts, erosion 1068–76

Particles
charged, trajectory in time-varying laplacian fields 1396–404
electrical breakdown by impact 2044–54
dielectric, scattering by 476–80
elongated, scattering and emission of radiation by clouds of L1–4
size analysis 1962–8
soot, thermal ionization of L4–6
transmission through porous materials 793–8
Perfluoroalkanes
electrons in 983–93
Perfluorobutene-2
electron transport 741–6
Perfluorocyclobutane
electron transport 741–6
Permittivity
alcohols in heptane 1815–23
liquid, complex 589–600
liquid, determination 1576–87
powder and bulk 1469–72
protein powders 373–85
Perspex
electric strength 410–4
thermal expansion 1614–20
Phonons
drag in bismuth 1358–67
Photocathode
improved GaAs transmission L89–92
thermionic emission from 1489–98
Photoconductivity
photovoltaic properties of CdS–Cu_2S cells 1700–11
thallous sulphide 833–6
CdS 1945–50
Photoelasticity
optical activity 883–95
photoelastic pressure vessel, models, strains in 373–85
Photoelectric emission
from electrodes 1712–9
from metal surfaces 1157–9
photocurrents in polythene 1368–73
Photomagnetism
$FeBO_3$ 810–21
Photomultipliers
for detection of light pulses 1106–10
noise statistics 915–30
Photons
correlator for velocity measurement L100–2
diffusion model for light scattering 837–46
scattering, estimation 1374–6
Photorheology
method of stress analysis 2129–44
Photovoltages
measurement of surface-state density L52–4
Plasma: *see also Discharges, electric*
afterglow study 1226–38
column, electron density L47–51, 241–52
column, hollow-cathode discharge 1865–9
diagnostics, orifice probe for 2152–60
excitation multimode cavity 235–40
floating double-probe method, effect of magnetic field on 151–4
flow pinch 2026–36
gas flow through 310–3
heating of, by plasma gun 1558–60, 1861–4
incompressible, magnetic diffusion into 525–32
in laser light 1824–8
interaction with beam 241–52
low-velocity flows through 310–8
magnetic diffusion into 525–32
motion, Fourier analysis of 2015–25
pinch, continuous flow 2026–36
rotating, formation in a homopolar configuration 693–700
theta-pinch, rotational disturbances L105–7
torches, distribution of energy transfer from 79–88
velocity distribution measurement 1422–32
Plastic deformation
Ga 2068–74
Plastics
carbon-fibre reinforced, nondestructive testing of 782–92
glass-fibre-reinforced, damage in 1621–36, 1637–49
Polymers: *see also Plastics, Perspex*
polyacrylonitrile-based carbon fibres, electronic properties 169–79
polyethylene, carrier transport in 162–8
polyethylene, electrical breakdown in 575–9, 647–55
polyethylene, electrical conduction in 1654–63
polyethylene, phototransient current 1368–73
polyethylene, traps in 2115–23
polymethylmethacrylate, electrical breakdown of 647–55
polystyrene–polybutadiene copolymer, mechanical properties of 344–58
polyterephthalate, conductivity L17–8
polytetrafluoroethylene (PTFE), contact angle with deuterium oxide 1870–3
Pores
effect on spin-wave transit time L93–6

Porous materials
distribution of path lengths through 793–8
light scattering in 837–46
Potassium compounds
KAg_4I_5, thermoelectric properties 443–5
KBr, electrical breakdown 647–55
KCl–KBr mixed crystal formation 767–73
KDP, cooled-KDP temperature 1743–4
KD*P laser-induced damage in L13–6
$KNbO_3$ crystal, dielectric constant 1474–7
$KNbO_3$ crystal, surface-charge layer 1937–44
Powders
dielectric measurement 394–409
diffraction identification 1874–6
permittivity in 1469–72
Proteins
dielectric measurements on powder 394–409
Pressure vessel
model, stress distribution 373–85

Quantum electronics: *see Lasers*
Quartz
surface conductivity 1038–45

Radiation
by elongated particles L1–4
radiative transport, scattering efficiency factor 476–80
source mixer (Josephson junction) 180–4
Reflection
reflectance ratio measurements 2288–91
Relaxation
CeF_3 films 1133–45
SiO films 1349–51
Resistivity, electrical: *see also Conductivity, electrical*
van der Pauw's theorem for anisotropic media 1127–32
Rheology
photorheological method of stress analysis 2129–44
Rhodium
thermal conductivity of, at high temperatures 155–9
Ruby
lasers, Cr^{3+} concentration 1418–21

Salt: *see sodium compounds*
Scattering, light
changes due to electric field 297–309
microporous materials 837–46
nematic liquid crystals L25–9
Scattering, particles
efficiency factor for radiative transport 476–80
electrons by atoms 2095–104
photons and molecules, optical analogue experiments 1374–6
Scattering, radiation
by elongated particles L1–4
Schottky diodes: *see Semiconductors*
Selenium compounds
$Cd_xPb_{1-x}Se$ and $Mg_xPb_{1-x}Se$, properties 1671–9
Semiconductors: *see also individual names*
amorphous, a review 865–82
diffusion of minority carriers 639–46
electric field intensity in, measurement of 1000–4
equilibrium space-charge L82
instability 1344–8
junctions, p–n, SiC 656–66
ohmic contact 185–7
Schottky diodes, activation energy 1930–6
Schottky diodes, conduction in 1920–9
surface-state density by photovoltage measurements L52–4
switching behaviour L29–31
TRAPATT operation, threshold conditions of L43–6
Shock tubes
electrothermal, for Ar 449–60
variation of driver gas and driven gas L109–10
Shock waves
velocity measurement 1561–75
Silicon
crystals, measurement of boron ions in 1654–63
Silicon compounds
silicate glass, stimulated emission 1788–99
Ni–Si alloy, energy changes in magnetization of 681–5
SiC, etch hillocks on 390–3
SiC fibres, failure mechanisms 2075–86
SiC, p–n junction cold cathodes, properties of 656–66
Si–Fe, magnetic domain structure 1720–6
SiO films, dielectric properties 1349–51
Silver
films, removal 1046–8
polycrystalline, electron microscopy L59–65
Silver alloys
instrumental properties 1650–3
Sodium compounds
NaCl, dielectric breakdown L83–4

NaCl, dissolution studies on 774–6
NaCl, electrification from salt water on heated metals 753–5
NaCl, tellurium-doped thermoluminescence 446–7
NaCl, thermoelectricity of molten salt thermocells 1199–211
Sound
generation in Rijke tube L73–5
Sparks, electric: *see also Breakdown, electric*
electrode erosion 2190–4
spark channels, spectroscopic investigation of 253–65
spark gaps, triggering by laser 97–103
Spectra: *see also Spectroscopy*
daylight 1513–20, L85–8
intensity in glow discharge 1260–6
gaussian and lorentzian spin resonance lines 670–2
ionic, in interrupted vacuum arc 994–9
Er^{3+}, absorption and fluorescence 1788–99
Spectroscopy: *see also Spectra*
electron, secondary, of polycrystalline silver L59–65
spark channel 253–65
photon correlation spectroscopy L23–5
Steel
hardness 1284–93
Strain
photoelastic pressure vessel models 373–85
Streamers
cathode-directed 1448–52
propagation, computer model for 2179–89
Stress
analysis, photorheological method 2129–44
calculations for magnetic field coil 1745–59
corrosion cracking detection methods for 1120–2
cyclic, measurement 1274–83
distributions, in glass-reinforced plastics 1621–36, 1637–49
distributions, in pressure vessel models 373–85
stress-induced motion, effect on conduction current 1111–6
stress-optic coefficient in optical glass 2283–7
Sulphur compounds
sulphide films, electroforming and conduction in 1686–91
SF_6, diffusion and drift of electrons 1090–5
Superconductors
AC loss and flux instabilities in 613–27
flux pinning in rotating field 2252–65
Josephson junction as frequency analyser 180–4
low-field critical current densities in 628–38
superconducting-to-normal transition, surface impurities 1005–15, 1016–26
Nb–Zr 628–38
Surfaces
asperity heights of 319–24
conductivity in solids 1038–45
films, effect on laser damage 2105–14
finish of electrodes, effect on breakdown 1845–54
impurities, in superconductors 1005–15, 1016–26
metal, ion bombardment of 2231–51
metal, photoelectric emission from 1157–9
surface-charge layers on $KNbO_3$ crystals 1937–44
surface states, density of L52–4

Tantalum
impurities, superconducting-to-normal transition 1005–15, 1016–26
Teflon
surface conductivity 1038–45
traps in 2115–23
Tellurium alloys
Hg_3Te_3–In_2Te_3, electrical and phase properties to high pressures 1330–43
Tetrafluoroethylene: *see also Teflon*
flashover electrical breakdown across 575–9
Thallium
doping of NaCl, thermoluminescence 446–7
Thallium compounds
thallous sulphide, photoconductivity 833–6
Thermal conductivity
isotropic heterogeneous medium 1304–20
Thermal expansion
apparatus for measurement 1614–20
composite materials 1321–9
Perspex 1614–20
Thermal ionization
soot particles L4–6
Thermally stimulated currents in Teflon and polyethylene 2115–23
Thermionic emission
from photocathode 1489–98
Thermocells
molten salt 1199–211
Thermodynamics
efficiency of processes 28–42

halogen lamps L67–8
Thermoelectric properties
potential of molten salt thermocells 1199–1211
KAg_4I_5 443–5
Thermoluminescence
x-irradiated NaCl: 446–7
LiF 1164–7
Thermomagnetism
effects in bismuth 1358–67
materials, comparison of 1478–88
Thermoplastics
mechanical properties 2215–25
Thickness measurement
oxide film 2292–9
thin films 1160–3, 1554–7
Thin films
AC electrical properties of CeF_3 1133–45
calculation of thickness and optical constants 1160–3
elastic, deadherence in 359–72
electron probe analysis of 1502–12
gettering action of Ti and Er 1177–84
optical reflection and transmission 847–51, 852–63
oxide, stored charge in 1153–6
thickness measurement 1554–7
water, structure 2064–7
Al on GaAs 756–66
CdS, ZnS, electroforming and conduction 1686–91
SiO, microwave relaxation phenomenon 1349–51
Tin
additives in ferrofluids 2273–82
Titanium
films, gettering action 1177–84
Townsend
discharge, characteristics of 966–72
ionization coefficient L79–81, 569–74
Transmission
microscopy of thin films 1554–7
optical, by thin films 847–51, 852–63
GaAs photocathode 89–92
Transport
properties of alloy systems 1671–9
radiative, scattering efficiency factor 476–80
Triglycine selenate and sulphate
properties of 188–92
Tungsten
welding, stability of gas–liquid interface 1096–105

Ultrasonics
resonance method for nondestructive testing 782–92

Vacuum arcs: *see Arcs, electric*
Vapour discharges: *see Discharges, electric*
Velocity
distribution of conducting material 950–5
driver gas, measurement L100–2
fluids, by Doppler effect 481–95
shock and detonation waves 1561–75
Viscoelasticity
in microtensile testing 1531–9
Viscometer
falling-cylinder 214–24
Viscosity
elastico-viscous liquids 141–50

Water
electron attachment in 514–24
films, structure 2064–7
microstructure of layers 2064–7
structure, alterations 589–600
vapour adsorption in solids 1038–45
Waveguides
screened surface 1049–62
Waves
submillimetre, modulation by free-carrier absorption in Ge L18–22
Welding
crack detection 1120–2
stability of weld pools 1096–105

X rays
diffraction, powder diffraction identification 1874–6
emission in vacuum 569–74
ionization in Auger spectroscopy L69–72
spectra, analysis of cold-worked alloys 1650–3

Yttrium compounds
$YAlO_3$, continuous laser action in 228
$Y_{3-2x-c}Ca_{2x}Gd_cFe_{5-z-c}V_zIn_zO_{12}$ garnets as potential microwave materials 1031–7
$YFeO_3$, detection of bubble domains in 440–2

Zinc compounds
ZnS films, electroforming and conduction 1686–91

Author index with titles

(R) denotes a Research Note.

Abbis J B, Chubb T W, Mundell A R G, Sharpe P R, Oliver C J and Pike E R: laser anemometry in an unseeded supersonic wind tunnel by means of photon correlation spectroscopy of backscattered light L100

Adams R D: damping of ferromagnetic materials at direct stress levels below the fatigue limit 1877

Adams R D and Fox M A O: measurement of the damping capacity and dynamic modulus of high-damping metals under direct cyclic stresses 1274

Ahtee M: *see* Pehkonen S 767

Airey D R, Swift J D and Gonza C F: vapour density variations in a pulsed mercury discharge 2161

Allen H G: the strength of thin composites of finite width, with brittle matrices and random discontinuous reinforcing fibres 331

Allenson M B, King P G R, Rowland M C, Steward G J and Syms C H A: an improved GaAs transmission photocathode L89

Amemiya H and Wiesemann K: measurements of the contact potential between an emitting electrode and a probe within a plasma 1829

Amson J C: electrode voltage in the consumable-electrode arc system 89

Andreou D, Little V I, Selden A C and Katzenstein J: the output characteristics of a *Q*-switched liquid laser system, Nd^{3+}: $POCl_3$: $ZrCl_4$ 59

Andreou D, Selden A C and Little V I: amplification of mode-locked trains with a liquid laser amplifier, Nd^{3+}: $POCl_3$: $ZrCl_4$ 1405

Antal K G: *see* Bitó J F 601

Arnikar H J, Damle P S and Chaure B D: 'aquoluminescence' from γ-irradiated crystals: effect of isothermal annealing (R) 1123

Arridge R G C and Folkes M J: the mechanical properties of a 'single crystal' of sbs copolymer—a novel composite material 344

Asano K and Bright A W: on the theory of charge collection in electrostatic generators 1185

Assabghy F Y I: *see* Robson D 169

Augis J A: *see* Gray E W 1068

Austin J M and Smith A L S: analysis of positive ions in CO_2 gas laser systems 468

Awakuni Y and Calderwood J H: water vapour adsorption and surface conductivity in solids 1038

Ayres D J: *see* Collyer A A L73

Bader M G and Bowyer W H: the mechanical properties of thermoplastics strengthened by short discontinuous fibres 2215

Balakrishnan K G: *see* Pillai P K 1027

Bansigir K G: *see* Bhagavan Raju I V K 774

Barber P B, Swift D A and Tozer B A: the formation of rotating plasmas in a homopolar configuration 693

Barlow H M: measurements of dispersion in dielectric-loaded submarine telephone cable 225

Barlow H M: screened surface waves of the dipole family in a coaxial waveguide 1049

Barnes D G: *see* Neild D J 2292

Barrault M R and Craig A D: magnetic diffusion into a moving cylindrical incompressible plasma 525

Barrault M R: *see* Kekez M M 253

Barton I J and Goodwin D W: continuous laser action in $YAlO_3$ 228

Baumgartner W and Schmid J: space-charge saturation in channel electron multipliers 1769

Bayly A R and Townsend P D: glass machining by ion sputtering L103

Bellau R V and Widdowson A E: some properties of reverse-biased silicon carbide p–n junction cold cathodes 656

Belmont M R and Secker P E: the dependence on trace impurities of the observed carrier mobilities in n-hexane 2212

Beninger D J and Marton J P: optical transmission microscopy of thin metal films on ceramic substrates 1554

Bensimon J: *see* Lesigne B L109

Berghmans J: stability of a gas–liquid interface and its relation to weld pool stability 1096

Berman R P: *see* Curzon A E 1046

Bernini U and Porreca F: a magnetostriction measuring method 1951

Bevir M K: the effect of conducting pipe connections and surrounding liquid on the sensitivity of electromagnetic flowmeters 717

Beynon J D E: an experimental comparison of two theories of non-equilibrium ionization in gases 555

Beynon T D: the application of space-dependent multigroup theory to the analysis of neutron slowing down time experiments—II. graphite and lead moderators 1521

Beynon T D and Moon J R: thermal neutron transport near a moderator discontinuity using the method of weighted residuals—I. theory 931

Bhagavan Raju I V K, Hari Babu V and Bansigir K G: impurity-enhanced dissolution studies on NaCl crystals 774
Bichard V M, Davies P H, Hulme K F, Jones G R and Robertson D S: electro-optic measurements on lithium germanate ($Li_2O.GeO_2$) and lead germanate ($5PbO.3\ GeO_2$) 2124
Birch J R and Jones R G: submillimetre wave modulation by free carrier absorption in germanium L18
Birch K G and Green F J: the application of computer-generated holograms to testing optical elements 1982
Birdseye P: *see* Wilkes T J 2226
Birtles A B: closed-form expressions for the magnetic field due to a single-layer cylindrical coil 1
Birtles A B: efficient charged particle trajectory calculations in time-varying laplacian fields 1396
Birtles A B and Travis J R: a method for the computation of characteristics of a Townsend discharge 966
Birtles A B: *see* Travis J R 973
Bishop J E L and Clay P M: magnetic domain interpretation of the angle and field dependence of permeability and loss in (110) [001] SiFe 1720
Bishop P T: *see* Owen M J 1621
Bitó J F and Antal K G: on the breakdown phenomena of capacitive discharges (R) 601
Blaney T G and Bradley C C: the Josephson junction as a frequency analyser and mixer of submillimetre radiation sources 180
Bolwijn P T and van Doorn R A: on the selective erasure of cathodochromic image displays 896
Bosnell J R and Thomas C B: switching in amorphous elemental semiconductors, Si and Ge L29
Bourgoin D, Volf E and Joly M: mesure de la permittivité complexe relative en ondes centimétriques de liquides fortement polaires: application à l'eau et au diméthylsulfoxyde 589
Bowen J R: *see* Schwar M J R 1561
Bowman B: measurements of plasma velocity distributions in free-burning DC arcs up to 2160 A 1422
Bowyer W H: *see* Bader M G 2215
Boyes A P: *see* Ponter A B 1870
Bradley C C: *see* Blaney T G 180
Bright A W: *see* Asano K 1185
Brignell J E: *see* Hewish T R 747
Brinkworth B J: a scattering efficiency factor for radiative transport 476
Brookes C A, Green P, Harrison P H and Moxley B: some observations on scratch and indentation hardness measurements 1284
Brown C G, Hancox N L and Reynolds W N: nondestructive testing of carbon-fibre-reinforced plastics—a study of an ultrasonic resonance method 782
Burch D S: *see* Fletcher J 2037
Burrow N G and Burtt R S: noble metal ion bombardment of polycrystalline metal surfaces 2231
Burtt R B: *see* Burrow N G 2231

Calderwood J H: *see* Awakuni Y 1038
Calderwood J H: *see* Singh B 1457
Caldwell J: *see* Gibson R D 1377
Campbell B, Messerle H K and Stokes A D: shock collision in preheated argon 449
Campbell R D: *see* Denton R E 852
Capp B: the power balance in electrode-dominated arcs with a tungsten anode and a cadmium or zinc cathode in nitrogen 2170
Carey R and Thomas B W J: the effect of inclusion energy on domain nucleation at inclusions in uniaxial materials 200
Carpenter L G and Watts M J: estimation of the conductance of channels for rarefield gas flow by means of an optical analogue 1374
Celasco M and Mazzetti P: magnetostriction of grain-oriented ferromagnetic cubic materials 1604
Čerić V: investigation of DC electroluminescent characteristics of CdS:Cu powder phosphors (R) 1168
Čerić V and Ogorelec Z: investigation of the AC electroluminescence of CdS:Cu powder phosphors (R) 1173
Chadband W G: *see* Singh B 1457
Chadwick J: *see* Lacklison D E 810
Challis L J and Price N F: an investigation of a possible correlation between the laser output of a ruby rod and the chromous ion concentration (R) 1418
Champion J V, Meeten G H and Tench M D R: method of obtaining concurrent measurements of circular and linear birefringence (R) 510
Chan D S: *see* Thanailakis A 1930
